WESTMINSTER ~ MARYLAND

Introduction—

We send you greetings and present to you our catalogue which we sincerely hope will prove interesting and valuable and be your constant planting companion. It is completely revised and designed for your usefulness and convenience.

We take this opportunity to thank our customers for their liberal patronage of past seasons, and respectfully solicit future orders. Our progress has been steady, and the wonderful way that we receive repeat orders from our customers is the greatest tribute we know of—and we realize with happy satisfaction that so many of our past patrons have con-

tributed to our success by recommending our stock to their friends.

It would be a pleasure to have you visit us here at Westminster, and we are sure your visit would be interesting and pleasant. If, however, this is not convenient, send in your order, and you may be certain it will be filled to your entire satisfaction with stock that is first-class in every respect, carefully dug and expertly packed.

Remember, we are always pleased to serve you, whether your order is large or small, and each and every order receives the same careful and personal attention. For over forty-five years we have been serving a long list of patrons, and rank as one of the largest growers in the country.

There is one important point which we particularly want to stress; namely, that every item offered in this catalog is grown right here in our own nursery. Each year we start thousands of tiny plants of every description in our extensive Propagating and Greenhouse Departments—plants that some day will be giants of the forest; or bold, sweeping lawn specimens; or fragrant flowering shrubs; or perhaps delightful Alpine plants nestling between the stones of the rock garden.

And from the very time when these plants are started until, perhaps many years later, some of them become a harmonious part of your homegrounds, they have had the very best care and attention possible to give a growing plant by scientific, modern methods. Furthermore, and so mightily important, every single plant delivered to you is freshly dug and the plant is vibrant, alive, eager-to-grow.

This catalog covers practically all of our stock; yet, we have still many more varieties and sizes of plants which are not listed. Therefore, if you do not find herein a particular plant you are interested in, please write or get in touch with us—more than likely we will have it.

And now, just one more word before you turn the pages of the catalog—we hope you will like it and we shall look forward to hearing from you.

Mr. J. E. Stoner, Proprietor of the Westminster Nurseries, extends his appreciation of your patronage. The growing of plants has been his lifelong hobby and work. In 1893 he established the Westminster Nurseries which, today, present a landmark of extensive achievement.

GENERAL INFORMATION—

Please Read Carefully — It Will Help Us to Serve You Better

HOW TO ORDER. Please order early. Be sure to always write or print your name and address plainly. Give Post Office, County and State, and do this every time you write. List varieties and sizes of Nursery stock exactly as printed in the catalog. State how the goods are to be shipped, whether by mail, express or freight, and to what point goods are to be sent. Keep a correct copy of the order and check off the items when they arrive. Ladies will please oblige us by prefixing their names with "Miss" or "Mrs." as the case may be.

SUBSTITUTION. It is our custom, should the supply of a variety become exhausted, which occasionally occurs in all nurseries, to substitute in its stead a similar sort, properly

labeled. If you prefer not to have us do this, write "No Substitution" on your order.

PACKING. All orders are packed with the utmost care and as lightly as possible, thereby reducing the expense of transportation to a minimum. All goods at prices quoted are packed free. Everything is labeled.

SHIPPING. We are located on the Western Maryland Railroad which has prompt connection with the Pennsylvania R. R., the Baltimore and Ohio R. R. and the Norfolk and Western R. R. Truck Transportation Companies and Through Bus Lines pass our office on regular schedules. Our shipping season for spring begins about March 1st and continues until the last of June; our fall season begins about August 20th and continues until the ground is frozen ofttimes until after Christmas.

TRUCK DELIVERY. We can frequently make deliveries with our trucks by special arrangements.

SHIPMENTS BY PARCEL POST. Many of the smaller sized deciduous plants can be shipped to advantage by parcel post. Usually, plants should not be more than three feet in height for parcel post shipments.

TERMS. Payment should be made at time of ordering or before shipment, when ordered direct from the Nursery. If order is placed with one of our bonafide salesmen, payment should be made on delivery unless otherwise agreed. We prefer to make no shipment C. O. D., but will, when requested, ship in this way, provided twenty-five per cent of the amount of an order is sent with the order, with return charges added. Kindly remit by Postal Money Order, Registered Letter, Draft, Express Money Order or personal check. Please do not ask us to open accounts for less than \$10.00 orders. Prices in this catalog cancel previous quotations. We reserve the right to change prices without notice. No change or countermands of an order may be considered final without our written consent.

RATES. I to 4 plants of one variety and size will be sold at the each rate; 5 to 24 plants of one variety and size will be sold at the ten rate; 25 to 249 plants of one variety and size will be sold at the hundred rate; 250 or more plants of one variety and size will be sold at the thousand rate. The rates quoted govern the prices.

CLAIMS AND ADJUSTMENTS. Any error or omission on our part will be satisfactorily adjusted if notification is given within five days from receipt of goods. Damages in transit should be taken up immediately with your Express or Freight Agent; advise us at the same time which will help us to help you.

GUARANTEE. All stock is guaranteed to reach you in good condition. In most cases the success or failure of growth

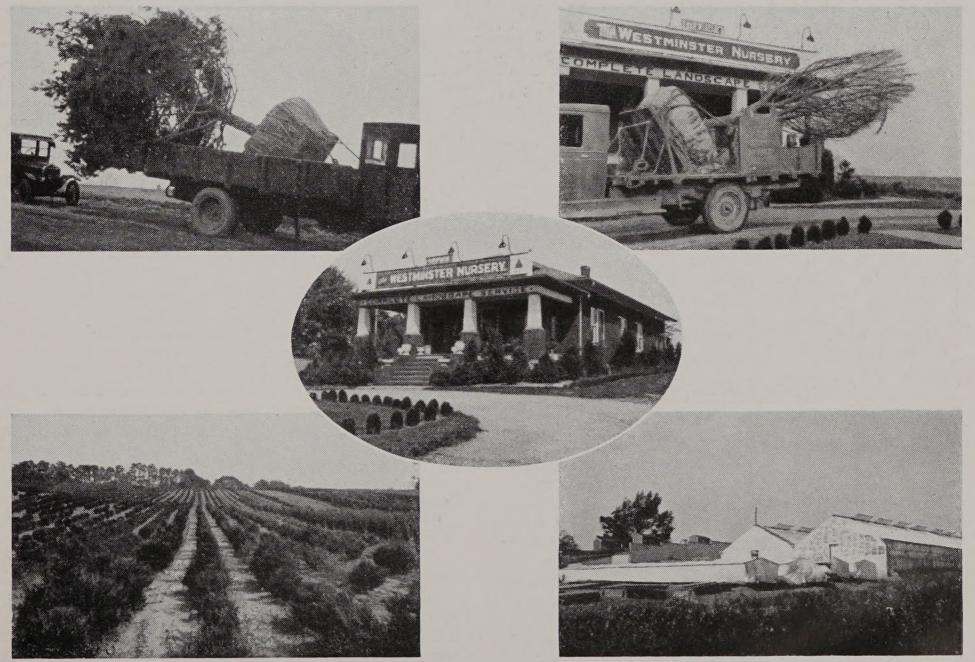

depends in a large degree on the care and management of the stock after it is received by the customer. Remember, a tree, shrub or plant is a living organism as much as any animal or person. It breathes, drinks and feeds and is liable to attacks of disease and insects; therefore, it is humanly impossible for us to guarantee growth or to be responsible for stock after it is delivered to our customers in good condition. The greatest care is exercised to keep our stock clean and true to name, and while we hold ourselves in readiness, on proper proof, to replace free of charge all trees, etc., that may prove otherwise, or refund the amount paid, we give no warranty, expressed or implied, as to description, quality, productiveness or any other matter of any Nursery stock, seeds, bulbs or plants we sell. A Maryland State Certificate of Inspection is attached to each shipment.

Keep plants and trees watered well during dry seasons, cultivate the ground and keep all weeds hoed out. Give light feedings of wellrotted manure or fertilizer if needed, but do not overdo it.

LETTER QUOTATIONS. We are pleased to quote Special Letter Prices and Terms when you send us your list stating quantity of each variety and sizes of plants wanted.

OUR LOCATION. We are located on Route No. 140, adjoining Westminster, the County Seat of Carroll County, Maryland, and is twenty-eight miles Northwest of Baltimore, Md., and twenty-two miles south of Gettysburg, Penna. Look for our signs, or ask anyone for the location of The Westminster Nurseries.

WESTERN UNION TELEGRAPH, Westminster, Maryland LONG DISTANCE TELEPHONE, No. 222, Westminster, Maryland

The two top pictures are examples of how we handle and transplant large shade and evergreen trees. The center picture shows our office building and a partial view of the office grounds. The lower left-hand picture is a view of one of our large blocks of evergreens. The lower right-hand picture shows a partial view of some of our greenhouses, cold-frames and packing buildings.

New residence of Mr. J. E. Stoner, Proprietor of the Westminster Nurseries, showing partial view of the landscaping with a low-clipped Canadian Hemlock hedge in the foreground.

Landscape Department

क्र

We design and build Alpine gardens, perennial borders, naturalistic rock work, pools, and are equipped to completely landscape large or small estates, small homes, churches, schools, institutions, country clubs; in fact, any situation that calls for plant material.

Being growers, we have the advantage of knowing the exact requirements of the different plants. Naturally, this knowledge is essential to the attainment of best results in landscape composition.

Many persons have excellent ideas about the development of their home-grounds; and yet, before carrying out these ideas, they like to have the expert advice and suggestions of those who thoroughly understand planting problems. Others have peculiar and complicated problems that need just a certain touch to create the proper picture. Still others want their grounds landscaped with all possible haste.

Complete Landscape Service

Our Landscape Department is complete and competent. No matter what your problems, write to us. We frequently give adequate landscaping advice by mail; but better still, make an appointment for one of our men to call on you and go over your requirements in person—if necessary, he will draw you an accurate plan which will enable you to easily visualize your particular planting, giving complete estimate of the cost.

This service is without obligation to you. The plans drawn by us are the property of the Westminster Nurseries until the client places with us his order for the plant material or work called for on the plan, after which the plan becomes the sole property of the client.

Special arrangements are made with those who are at very distant points from Westminster. Appointments can be made by your personal visit, by letter, or by telephone, "Westminster 222."

Large Tree Moving

Our fleet of trucks, equipped with powerful motor-driven winches, make large tree moving easy and safe. The trees are dug in such a manner that none of the important roots are the least bit disturbed or removed from the earth in which they were growing. The trees are quickly transported to their new location and continue to grow and live as if they had not been moved at all.

Our Large Tree Moving Department has grown to be one of our most important departments. Naturally, thorough knowledge and understanding of the work, coupled with modern equipment and competent men, account for the continued success of this department.

Let us give you our estimate on moving large shade trees, Evergreens, Boxwood, etc. Often a favorite tree outgrows its location; or immediate landscape effect might be desired—whatever the case, we can serve you satisfactorily at low cost.

Large Trees

We can supply large, developed trees in most of the standard varieties of Shade Trees, Evergreens and Fruit Trees. Let us give you our quotations on large trees.

Mr. and Mrs. J. E. Stoner and daughter arriving home after attending the American Association of Nurserymen's Convention in Portland, Oregon.

EVERGREENS

Green of every shade and hue, charmingly contrasted with blue, gold and gray, their foliage is always pleasing. Pyramidal or erect, globular or spreading, you can find forms for every fancy. For groups or screening, in shelter planting or hedges, you have nothing quite to equal them. In summer they are attractive, in winter they offer a comforting note to the bleak landscape and under the weight of ice and snow their great drooping branches lend enchantment and cheer. Evergreen trees when received from our Nurseries are balled and burlapped. Our experince proves to us that Evergreens handled this way (B&B) can be planted as soon as the frost leaves the ground in spring and up until the ground is frozen again in the fall or early winter.

When planting Evergreens, dig the hole eight to ten inches larger than the ball, and about one inch deeper; the burlap should be loosened and laid down in the hole or removed if possible to do so without breaking the soil from the roots. Step back and see if the plant is straight and placed to the best advantage in relation to other plants and surroundings. Now fill the hole almost full of soil, pack firmly, and then fill with water. After the water has soaked down, fill completely with soil and tramp it down until it is

firm and level

At all times keep the soil cultivated. In dry weather, water at intervals of seven to ten days. Water thoroughly and see that it penetrates well down to the roots. Watering or sprinkling a little every day

does more harm than good. Evergreens will grow in any good garden soil.

Our Evergreens are all carefully grown, well-spaced for symmetrical development, are root and toppruned into shapely, compact plants. Most all Evergreens have to be sheared to develop into specimens, especially those used in foundation plantings.

Abies – The Firs

Abies concolor (White Fir). 75-100 ft. A majestic evergreen with abundance of large gray-green needles which seem to turn bluish as the tree grows older. Grows quickly and forms a symmetrical, beautiful specimen; the cones are rich green to purplish.

$2\frac{1}{2}$ to 3	ft		ft

Cedrus — The Cedar

Cedrus atlantica argentea (Silver Atlas Cedar). 60-80 ft. Unusually ornamental with wide spreading branches, abundant cones, and nearly silverywhite foliage. Prefers well-drained, loamy soil. This is a true Cedar and is not to be confused with Redcedars which are types of Juniperus virginiana.

Cephalotaxus

Cephalotaxus drupacea (Japanese Plum-yew). 8-10 ft. Yew-like plant with handsome, graceful evergreen foliage on spreading branches; prefers moist, well-drained sandy loam and requires winter protection.

Evergreens are truly the foundation of the planting. Let us quote you prices on your list of requirements.

EVERGREEN SHRUBS

Sometimes one finds it rather difficult to draw a hard and fast line between trees and shrubs. Frequently small trees and large shrubs so merge that in truth they could be called either. And then, too, there are certain shrubs of climbing habit that could easily be classed under vines. So in the foregoing list of Evergreen Shrubs there are included plants that may be rightfully called vines, groundcovers, creepers, and large bushes, some of which bear handsome flowers in addition to foliage which is beautiful and persistent the year around.

We cannot overemphasize the importance of using more Evergreen Shrubs in formal landscape and intimate home plantings. They are happily planted, too, along streams, under trees; most of them like shady places best. All of these shrubs come to you freshly dug, balled and burlapped.

Abelia grandiflora

Abelia

Abelia grandiflora (Glossy Abelia). 3-5 ft. A choice shrub with bright, shiny foliage and a mass of light pink blossoms produced throughout the entire summer months.

	Per 10

Azaleas

Nothing can quite exceed the brilliance of their abundant flowers in the spring. They are perfectly hardy, but in return for their great gift of beauty, they ask an acid soil, considerable moisture at blooming time, and a little shelter when the winter is severe. The evergreen varieties described here keep their foliage through the winter.

For Deciduous Azaleas see page 26.

Amoena. 4-6 ft. Conspicuous rosy purple flowers in April and May. The small glittering green leaves turn a rich, bronze-green in winter.

Berberis — Barberry

Berberis chenaulti (Chenault's Barberry). 3-4 ft. One of the most beautiful shrubs in existence for low edging or hedges. It becomes very bushy, with graceful branchlets densely clothed with small, glittering green, holly-like leaves, downy white on the under side. Fragrant yellow flowers in the spring are followed by black fruits.

Each	Per 10	Each 1	Per 10

Calluna — Heather

The Heather is truly one of the most beautiful plants grown, famous and historical. The folklore of the northern European peoples is rich in picturing this handsome shrub of dense, feathery, green growth that breaks into exquisite masses of flowers of the utmost delicacy. Here, too, is a rock garden plant of rare beauty. Heather likes well drained, sour soil, sun, and a good share of moisture; grows 1 to 2 ft. high.

Calluna vulgaris alporti. Crimson flowers, bright green foliage.

C. vulgaris aurea. Yellow foliage, pink flowers.

C. vulgaris humilis. Rich green foliage, tiny white flowers.

C. vulgaris rosea. Rosy-pink flowers, bright green foliage.

C. vulgaris rubra. Deep rosy carmine flowers.

Cotoneaster

A family of handsome shrubs, the Cotoneasters justify very choice positions in massed effects, in the border, on banks, and in the rock garden. The myriads of small white or pink flowers and red or black berries, together with the interesting manner in which the branches grow are reasons enough for the widespread favor of these shrubs. They prefer sunny positions in well-drained soil. Some varieties are thoroughly evergreen, some half-evergreen, others deciduous, but we have listed all of our Cotoneasters under Evergreen Shrubs with appropriate descriptions.

Cotoneaster divaricata (Spreading Cotoneaster). 5-6 ft. Deciduous, but with persistent leaves, and very charming with delicate pink flowers and bright red berries which hang on a long time.

Vinca — Periwinkle

Vinca minor (Common Periwinkle or Myrtle). 6-8 in. A neat, trailing little evergreen plant with glossy foliage and bright blue flowers profusely appearing in the spring. Superb as a ground-cover.

For small cost you can enjoy the beauties of a foundation planting or any type of garden. Remember, too, plants grow into greater value. Consult us on your planting problems.

A well-balanced garden with deciduous trees in the background

DECIDUOUS ORNAMENTAL AND SHADE TREES

Volumes could be written of trees, of their value and of their beauty. They are the oldest living things. We have listed herein the varieties of deciduous trees that are most valuable for their beauty and usefulness. Some are fast-growing, others slow-growing; some are beautiful and enchanting in the flowers they bear, others in their usefulness to mankind.

Deciduous trees can be planted as soon as the frost is out of the ground, and usually until late May; and in the autumn after two or three frosts, until the ground has frozen. In planting Deciduous Trees, dig the hole large enough so that the roots may be laid out straight, and deep enough so the tree will be about one inch deeper than it was planted in the nursery, which is shown by the collar on the trunk above the roots. While filling in the soil, shake the tree gently up and down and then tramp the earth in firmly. Soak thoroughly. It is usually advisable, especially on the larger size trees, to have guy wires on the tree for the first year until the roots become firmly established, as the swaying of the tree may disturb them. The following sizes of the trees are given in height by feet, and frequently also by the caliper or thickness of the trunk in inches.

Acer – The Maples

Acer dasycarpum (Silver Maple). 60-80 ft. Foliage
light green, silvery underneath. One of the hardiest
and fastest growing shade trees. Prefers rich,
moist soil but will thrive almost anywhere except
on dry ground. Brilliant autumnal coloring.

A. ginnala (Amur Maple). 15-20 ft. Valuable for its rich coloring in the autumn and the numerous panicles of fragrant yellow flowers in the spring.

Each Per 10 3 to 4 ft. 1.00 7.50 4 to 5 ft. 1.50 12.50

A. palmatum atropurpureum (Bloodleaf Japanese Maple). 6-8 ft. A good, dwarf tree with rich purplered leaves all summer. Distinctive, slow growing, does best in the sun.

DECIDUOUS SHRUBS

In diversity of form, variety of species, contrast of foliage and variation of blossom this group holds unusual interest and as a group they prove to be the finishing touches of virtually all landscape plantings. With trees we have made our bolder outlines and shaded the grounds—but we use deciduous shrubs to soften the borders or edges of drives, walks and boundaries; to emphasize some lawn feature; to mellow rigid lines or sharp angles; to fill depressions; to screen objectionable views; to cover slopes or divide areas. From early spring, yes, even late winter, they unfold their wondrous bowers of yellow, pink, white and red flowers on backgrounds of purple, yellow, light and dark green foliage. The attractive fruits and berries often adhere after autumn has spread its brilliant colors on the foliage. Proper selection as to height and careful choosing of varieties will insure the accomplishments mentioned and provide a source of indescribable pleasure.

Planting Suggestions

There is frequently a tendency to overplant in the attempt of immediate effect. Do not be impatient as it takes several years to grow mature plants. So, in planning your requirements, here is a general rule to apply: On real good soil the spread of a shrub usually approximates the height; in other words, a five to six foot shrub will spread just about that much. Of course, there will naturally be exceptions to this rule.

Dig holes and plant as deeply as they stood in the nursery row. Shake the plants so the soil will sift into the roots. Some shrubs have great masses of fibrous roots and if the soil is merely thrown on top, they will surely die. Contact with every root insures growth, so work the earth carefully through these masses. At the time of planting, it is beneficial to prune shrubs by taking off at least a third of the tops.

The pruning after development frequently causes confusion. "Prune when the knife is sharp" has long been a saying and few, if any, shrubs were ever killed by pruning. One time is really no better than another; but, unless otherwise necessary, you will find that the best results are obtained by light pruning immediately after the blossoms fall. Heavy pruning at any time will cause the plants to put aside their blossom-forming buds and make wood growth and you lose or lessen the next season's blossom. That is why light pruning is suggested annually or biennially. Pruning in the dormant stage is not injurious and some plants can be so much better shaped when the branches are defoliated. In all pruning it is suggested to not bob off the tops and make hedges of your massed plants. This causes a new "break" or ugly offset giving them a two-story effect. Shorten the canes to side branches so they will develop all the natural tendancy or other characteristics of the plant. To remove canes, cut close to the crowns as this causes them to renew naturally from the bottoms. Now for the perpetual exceptions—all terminal blooming plants like hydrangeas, hypericum, bush roses, etc., that bloom on the "tips" of the new growth, need severe pruning if large blossoms are wanted. Constantly renew this young wood by pruning in the dormant and semi-dormant period only. On all shrubs, cut out all dead and old wood. Lilacs should be pruned only once every six or seven years, and then cut back hard. Nothing benefits a shrub more than proper pruning. When done correctly, you will be rewarded with a wealth of bloom and beauty of shape.

Acanthopanax

Acanthopanax pentaphyllum (Aralia pentaphylla) (Fiveleaf Aralia). 7-8 ft. A strong, upright shrub with graceful arching, spiny branches covered with bright, shiny green foliage. Splendid for rockeries, shady places or as a hedge.

Forsythia

Forsythia

Forsythia intermedia (Border Forsythia). 6-9 ft. An upright-growing shrub and a profuse bloomer. In March or April, before any leaves appear, the stems are simply smothered in a mass of nodding, fourpetaled, bright yellow flowers. The shrub, when full grown, has slightly curved, graceful branches and for the greatest beauty should be allowed to grow at will.

Stephanandra

Stephanandra flexuosa (Cutleaf Stephanandra). 5-6 ft. The leaves are fernlike; masses of creamy-white flowers on pendulous branches. A delightful bit of delicacy. The foliage turns reddish-purple in autumn.

Styrax

Styrax japonica (Japanese Snowbell). 12-15 ft. Graceful shrub or small tree with slender, arching branches which bear clusters or racemes of fragrant white flowers in June and July.

Symphoricarpos

Symphoricarpos racemosus (Snowberry). 4-6 ft. A graceful bush, with attractive foliage and interesting tiny pink flowers in June. But best of all are the large white berries which weigh down the willowy branches in autumn and very often throughout winter. Although this lovely plant likes a moist, half-shady location, it will adapt itself to most any situation.

S. vulgaris (Coralberry). 4-5 ft. After the greenish red flowers bloom in summer, the wealth of coralred berries appear and hang on all through winter. An ideal plant for dry, partially shaded banks, but, happily, with adapt itself to most any place. Also known as Indian Currant.

Lilac

Syringa - The Lilacs

Syringa japonica (Japanese Tree Lilac). 18-20 ft. In June or July, several weeks after the Common Lilacs have bloomed, the enormous clusters of yellowish white flowers appear. The foliage is broad and downy.

	E	ach	Per 10		E	ach	Per 10

VIBURNUM—Continued

V. molle (Kentucky Viburnum). 10-12 ft. Similar to V. dentatum, with larger, darker green leaves. Very robust.

V. opulus (European Cranberrybush). 9-10 ft. One of the best shrubs for general planting. Panicles of white flowers in May and June, followed by large, cranberry-like fruit. Fine for winter color and for attracting birds. Does well in shade.

V. opulus nanum (Dwarf Cranberrybush). 1-2 ft. Forms a very dwarf, compact shrub with small leaves; seldom bears flowers. Each 12 to 18 in. 1.00

V. opulus sterile (Common Snowball). 9-10 ft. A shrub that is familiar to every one. Becomes covered in the early spring with perfect balls of snowy white flowers. Does best in a well-drained sunny spot.

V. prunifolium (Blackhaw). 12-15 ft. A clean cut shrub with a maze of graceful horizontal branches on stiff upright stems. Charming pure white flowers in May precede the large bunches of pink fruits which later turn black; very hardy.

V. sargenti (Sargent Cranberrybush). 10-12 ft. Similar to V. americanum, with flowers in long stalked cymes in May and June. The fruit is pink, turning to blue-black.

V. tomentosum plicatum (Japanese Snowball). 7-8 ft. In June the perfectly round balls of pure white blossoms show up exceedingly well among the handsome foliage. The foliage changes to a rich purple in autumn.

ROSES

Roses—the mere name is an inspiration to garden lovers. Nothing can take the place of the Rose. In order that you may have success in growing these beautiful plants, we offer a few cultural suggestions. They thrive best in a garden where the morning sun reaches them. It is well to excavate the ground to a depth of from 1 to 2 feet; place a layer of cow manure on the bottom and fill with good top soil. All roses should be planted so the place where they are grafted or budded is 2 or 3 inches below the surface. Tramp in firmly and water well; keep the soil around the roses well cultivated and clean. Roses can be protected in winter by mounding up the dirt around them and covering the ground with straw or litter to prevent alternate freezing and thawing.

Souv. de Claudius Pernet

Hybrid Tea Roses

Prices: Each Per 1
Strong, 2 yr., field-grown plants
Ami Quinard. Blackish, velvety crimson.
Betty Uprichard. Beautiful salmon, strong grower.
Caledonia. Large white, double flowers.
Chas. K. Douglas. Flaming scarlet, double.
Dainty Bess. Single, lovely flesh pink.
Dame Edith Helen. Pure glowing pink, very double.
Edith Nellie Perkins. Pink, salmon, gold.

Tulips, Hyacinths, Crocuses, Daffodils, etc.

Every autumn we carry a large assortment of these popular bulbs in the leading varieties. We offer only the large No. 1 size of genuine imported bulbs grown in Holland. Due to price fluctuations, we do not list the prices herein but will quote you special letter prices upon request.

If we can assist you in any way in helping you solve your planting problems, please feel perfectly free to write us.

Annuals

We have fast grown to be a large producer of choice annual plants such as Petunias, Ageratum, Allysum, Asters, Heliotrope, Marigolds, Scarlet Sage, Snapdragons, Verbenas, Zinnias, etc. We take special care as to selection of the very choicest seed and employ the best methods of raising the plants in our Propagating and Greenhouse Departments. The plants that we offer are all strong, well-developed transplants, conveniently sold either by the dozen or in flats of 100 plants to the flat. We also grow many of our plants in pots. These annual plants are ready for planting in the spring and we will be glad to quote you special letter prices upon request.

Vegetable Plants

Each year we produce large quantities of the leading varieties of vegetable plants including Tomatoes, Cabbage, Peppers, Egg Plants, etc. Grown under the same care and conditions as our annuals, these vegetable plants are certain to produce a sure crop under normal growing conditions. Special letter prices will be quoted upon request.

TRI-OGEN

The all-purpose spray

A POSITIVE PLANT PROTECTION

This complete Rose Garden Spray Treatment — Tri-ogen — offers the first definite mildew and black spot control combined with an insecticide. It kills all insects, including the sucking and leaf-eating types. It remains on foliage, repelling subsequent attacks.

Tri-ogen also stimulates plant growth, resulting in fine foliage and luxuriant blooms.

In four sizes:

Fast Day 10

HARDY PERENNIALS

The constantly increasing interest in hardy garden flowers is emphasized more each season in the demand for new and good perennials. With the infinite varieties available, the rock garden, bed or border can be made interesting throughout the year. Brilliant displays of color and harmonious designs are easy and fascinating to create with these charming Hardy Alpines and Herbaceous Perennials.

A Few Cultural Hints

Usually the best effects are obtained by planting Perennials in groups of not less than three of a variety. A few of the more robust Perennials, such as the Peony or Dicentra spectabilis are effective as individual specimens. The area being planted will determine the size of the groupings.

Most perennials may be planted in early spring, from the time the frost is out of the ground until late

June, or from the middle of September to the first of November.

For the new bed, spade to a depth of $1\frac{1}{2}$ feet, and incorporate a generous supply of well decayed manure with an application of bonemeal.

Old beds may be renewed every three years, the plants taken out of the ground and divided. The bed

should then be spaded up, fertilized, and the plants returned.

While Perennials grow in poor soil, yearly fertilizing will insure fine, sturdy plants, and constant cutting of the flowers assures continuous bloom. A careful selection of an assortment of varieties, and a little attention will reward you with bloom from early spring until very late autumn.

WE have quite a few varieties of Perennials and Rock Plants other than those listed in this edition of our catalog. We would be pleased to receive your list of any other varieties you might be interested in. If we can supply them, we will quote you very attractive prices.

An ideal spot on a hot summer's day

FRUIT TREES

ORCHARD PLANTERS: Send us your Want Lists for our Special Low Letter Prices on quantities, especially on Peach and Apple trees.

For nearly a half-century we have supplied fruit growers with fine fruit trees and plants. Hundreds of commercial orchards and small fruit plantings in Maryland and the surrounding states are live and profit-making testimonials that our fruit trees and plants are most reliable and satisfactory. Thousands of our trees have found their way into many western and Middle Atlantic states.

Many people with limited garden space find it interesting and worthwhile to plant a few Fruit Trees

for shade purposes as well as for fruit. All Fruit Trees are highly ornamental when in bloom.

After many years of careful study and discrimination, we have chosen the following varieties for hardiness, quality, deliciousness of fruit and prolific bearing. Send us your list of varieties, sizes and quantities wanted for our special letter quotations.

Apples

The Apple is the first in importance of all fruits. It will thrive on nearly any well-drained soil. Its period of ripening, unlike other fruits, extends nearly through the whole year. By making careful selection, a constant succession can be obtained.

Plant apple trees about 30 x 30 feet. Use peach as filler or compact growing apples such as Wealthy, Yellow Transparent. If planted 30 x 30 feet, with rows running north and south, the trees will protect each other in the row and the strip of land between the rows makes room for planting potatoes, beans, strawberries or something of that sort, and the cultivation which the crop receives is very beneficial to the orchard. Currants, gooseberries, raspberries, or rhubarb can be planted between the trees in the row and are benefited by the partial shade. When planting apple trees, cut off about two-thirds of the previous year's growth to balance the loss of roots.

Delicieus Apple

APPLES—Continued

SUMMER VARIETIES

Duchess of Oldenburg. Medium rather large, roundish, a little flattened at the ends; light red in broad stripes and splashes on yellow ground; flesh yellow, sub-acid; tender, juicy; very hardy, regular bearer; bears young; late summer.

Summer Rambo. Size medium to large, oblate form, smooth, streaked and marbled with dull yellowish ground; dots large, whitish, flesh tender, rich, mild, sub-acid, fine flavored. Last of August.

Yellow Transparent. Earliest and best of the early kinds. Medium size, roundish, slightly conical; pale yellow when fully mature; tender, juicy, sprightly sub-acid; good. August.

AUTUMN VARIETIES

Maiden Blush. Large, flat; pale yellow, with a red cheek; beautiful, tender and pleasant, but not highly flavored. An erect grower and a good bearer. Valuable for market. September and October.

McIntosh Red. Vigorous tree, rapid growing, spreading habit; long lived. Fruit tender, juicy, sub-acid, medium to large; aromatic white flesh. Middle September.

Rambo. Size medium, oblate form, smooth, streaked and marbled with dull yellowish ground; dots large, whitish, flesh tender, rich, mild sub-acid, fine flavored. September and October.

Smokehouse. Large, yellow, shaded with bright red; flesh firm, crisp, juicy and fine flavored. Highly esteemed.

Wealthy. Large, red, sub-acid, productive. Excellent for filler: good keeper; adaptable to cold climates and early bearing.

WINTER VARIETIES

Cortland. Fine quality red apple; flesh crisp, tender, juicy, sub-acid. Good keeper and good shipper. Ripens early October.

Baldwin. Large, bright red, crisp, juicy; tree vigorous, upright and productive. Good keeper.

Bedford Red. Medium large, bright red, flesh yellow, mildly sub-acid, fine-grained, and has a small core. The tree is a vigorous upright grower, very hardy; an outstanding variety, highly recommended.

Grimes Golden. Medium sized, rich golden-yellow color; flesh fine-grained, tender, juicy, with a delicious sweet-spicy flavor; tree a good grower and early bearer; very desirable.

Jonathan. Medium size, of a deep red color; flesh very tender, juicy and rich, a very productive apple, one of the best varieties for the table, cooking or market. Can be kept until late winter in cool storage place.

Mammoth Black Twig. One of the most profitable and valuable on the market; resembles the Staymans Winesap, except that it is from one-third to one-half larger; color dark red; flesh firm; flavor mild. A long keeper.

Red Delicious. Large, dark red, flesh fine grained, crisp and melting, juicy with a delightful aroma; vigorous, good keeper, excellent shipper.

Red Rome Beauty. A highly improved, superior strain, being red-skinned, large, very productive, an excellent keeper. A satisfactory, all-around first-class apple. Highly recommended.

APPLES-Continued

Spitzenberg. Very fine for winter use; will keep until February; bright red color, good flavor.

Stark. Esteemed as a long keeper and valuable market fruit; large, roundish, skin greenish yellow, shaded with light and dark red and sparkled with brown spots; flesh yellowish, juicy, mildly sub-acid.

Stayman's Winesap. Tree vigorous, hardy. Fruit medium size to large, round; skin smooth, bright red; juicy; a fine keeper; delicious.

Tolman Sweet. Medium size, yellow and red; richly flavored. Winter Banana. Vigorous grower; early bearer. Fruit medium to large, smooth, golden-yellow shaded with red blush; fine grained flesh, rich sub-acid, aromatic; excellent dessert apple.

Winter Paradise. Large fruit; color dull green; flesh white, fine grained, juicy, sweet. Very satisfactory.

York Imperial. Fruit large, lop-sided, smooth surfaced; color bright red to yellow; flesh yellowish, tender and juicy; flavor mild, sub-acid; quality very good.

CRAB APPLE

Hyslop. Deep crimson; large, hardy; tree vigorous.

Apricot

Ripens between Cherries and Peaches; best to plant on a northern or western exposure to prevent early blooming. Set trees 16 to 18 feet apart.

					Each	Per 10
				5/16 in. to 7/16 in. cal		6.00
4	to	6	ft.,	7/16 in. to 9/16 in. cal	.75	7.00

5	to	7	ft.,	11/16 in. cal. and up	1.00	9.00

Early Golden. Small, roundish oval; color pale orange with smooth skin; flesh yellow, juicy, sweet; hardy and productive; freestone.

Cherries

The compact shapeliness of Cherry trees, their glossy foliage, and spring glory of clustered blossoms, give them ornamental value even on the lawn. The trees are naturally hardy, succeeding best on sandy or gravelly loam, well drained. Avoid low or wet ground. Sweet varieties grow more rapidly and make large pyramidal trees. Set trees 18 to 20 feet apart. The Sour varieties are dwarf and bushy, bear earlier, and may be set 15 to 18 feet apart.

Bing. Very large, dark brown, almost black; flesh firm, sweet, rich, delicious. One of the most profitable. July.

Black Tartarian. Very large, black juicy, rich. Late June. Governor Wood. Clear, light red, tender and delicious; large. Hangs well on tree. End of June.

Lambert. One of largest of all Cherries; purple-red, rich. Prolific.

Napoleon Biggareau. Large, pale yellow with at least one red cheek; firm, juicy, sweet and productive. July.

Schmidt's Biggareau. Immense size, deep black, flesh dark, tender, very juicy, fine flavor; productive. July.

Black Tartarian Cherries

CHERRIES-Continued

Windsor. Large, firm, dark red fruit; juicy; July. Vigorous.

Yellow Spanish. Vigorous growth, large; pale yellow with red cheeks; firm, juicy and delicious; very good. Last of June.

Peaches

To secure healthy, vigorous and fruitful trees and fine fruit, the following points must be well attended to in peach culture: First, keep the ground clean and mellow around the trees, and give it an occasional dressing of wood ashes. Second, keep the heads low—the trunks ought not to exceed three feet in height. Third, attend regularly every spring to pruning and shortening the shoots of the previous year's growth. This keeps the head round, full, and well furnished with bearing wood. Cut weak shoots back about one-half, and strong ones one-third; but see that you have a sufficient supply of fruit buds. Sickly and superfluous shoots should be cut clean out. It should always be borne in mind that the fruit is produced on wood of the last season's growth, and hence the necessity of keeping up a good supply of vigorous annual shoots all over the tree.

In planting peaches, it is of the highest importance to cut back the trees severely. The stem should be reduced about one-third and the side branches cut back to one bud. This lessens the demand upon the roots, and enables remaining buds to push more vigorously. Most failures in newly planted orchards may be ascribed to a non-observance of these directions.

VARIETIES

Belle of Georgia. Skin white with red check; flesh white, firm and of excellent flavor; very prolific. Early August. Freestone.

Brackett. Orange-yellow skin tinged with carmine; deep yellow flesh; highly flavored. Last of August. Perfect freestone.

Hale Haven Peaches

PEACHES—Continued

Carman. Large, creamy white with deep blush; skin tough, flesh tender; fine flavor and quite juicy; semi-cling. Hardy. Early August.

Champion. Extremely large, handsome; creamy white with red cheek; sweet, rich and juicy. One of the best sorts. Freestone. Late August.

Crawford's Early. Large, roundish, bright yellow with red cheek; flesh yellow, juicy and sweet. Freestone. Early September.

Crawford's Late. Large, roundish-oval, yellow with broad red cheeks; flesh yellow with red at pit, melting. Freestone. Middle September.

Cumberland. Vigorous grower, hardy; large fruit attractively colored with red; oval in shape; flesh is white, firm, delicious; ripens five days before Carman; almost freestone.

Elberta. Large, yellow with red cheek; flesh yellow, firm, juicy, of high quality. Exceedingly prolific, sure bearer and hardy. The standard market variety. Freestone. August 25 to September 1.

Early Elberta. Ripens about a week earlier than Elberta.

Fitzgerald. Bright yellow and splashed with red; flesh deep yellow and of the best quality. Freestone. Early September.

Globe. Rapid, vigorous grower, enormous bearer; fruit very large, flesh firm, juicy, yellow, shaded with reddish crimson toward the pit; quality good, very rich and luscious. September and October. Freestone.

Golden Jubilee. One of the best quality peaches grown; early, medium to large size, firm; juicy, sweet, delicious. Excellent shipper. Freestone. About August 25.

Greensboro. Large, beautifully colored; good quality, juicy. Freestone. Early July.

Hale Haven. A very fine and hardy peach of recent introduction adaptable to the home or commercial planting. Follows Golden Jubilee and precedes Elberta. Freestone, yellow flesh, highly flavored. We highly recommend this fine peach and offer only the genuine, true strain.

Hea'h Cling. Very large and creamy white, with delicate red blush; flesh white, sprightly red at the pit; tender, juicy and swect. Late September. Cling.

Hiley Early Belle. Large, white and highly colored on sunexposed side; flesh is juicy, tender and white. One of the best shippers. Freestone. Early July.

PEACHES-Continued

J. H. Hale. A choice variety, larger than Elberta, and five days earlier; color a beautiful golden yellow, with deep carmine blush; flesh is golden yellow, firm and most delicious. Should be planted with other varieties for best results. Freestone. Late August.

Lemon Free. Lemon-shaped and color; large size, immensely productive, superior canning quality. Freestone. September.

Marigold. Early, yellow-fleshed; medium size, high quality. Ripens about a week before Carman. Semi-cling.

Niagara. Sound, perfect fruit; yellow, equal to Elberta and Crawford. August to September. Freestone.

Oriole. Yellow-fleshed of exceptional quality, medium to large size, ripening five to seven days before Carman. Freestone.

Radiance. Large, oval, white-fleshed; good color and quality; adapted to home or commercial orchards. Early August. Freestone.

Roberta. Similar to and about 10 days later than Elberta; excellent to lengthen the Elberta season. Freestone. September 10.

Rosebud. White-fleshed, ripening a few days after Greensboro; bright color, oval shape; flesh juicy, tender. Almost freestone.

Salway. Large, roundish; skin yellow, with a fine red cheek; flesh yellow, firm, juicy and sugary; late September. Free-stone

Shippers Late Red. Yellow, reddish skin; flesh yellow; good quality; good shipper; follows Elberta. Freestone.

South Haven. An excellent, hardy variety; very productive: flesh yellow, fine flavored. Freestone. September 1.

Stump. Medium large, roundish oval; flesh white, very good. Freestone. September 10.

To Gardeners, Orchardists and Planters requiring large quantities, we will quote special prices on your requirements. Be sure to mail us your lists before placing orders!

Pears

Will grow on almost any good soil but thrive best in a rather heavy clay or loam. Plant 18 to 20 feet apart for permanent orchards.

VARIETIES

Anjou (Buerre d'Anjou). A large, fine pear, buttery and melting, with sprightly flavor; tree a fine grower and very productive; one of the best. October to January.

Bartiett. Large size, with a beautiful blush next the tongue; buttery, very juicy and highly flavored, bears early and abundantly; vigorous. August and September.

Buerre Bosc. A large, russety pear with long neck; melting, highly flavored and delicious; bears well. September and October.

Clapp's Favorite. Very large, yellowish green to full yellow when ripe; marbled with dull red in the sun; covered with small specks; flesh melting and rich. Tree vigorous and good grower. August and September.

Duchesse d'Angouleme. Very large, greenish yellow, sometimes russetted; makes a beautiful tree and heavy bearer, buttery, melting and sweet. October and November.

Flemish Beauty. Fruit large, skin a little rough, pale yellow, mostly covered with patches of russet, becoming reddish brown at maturity on the sunny side; flesh yellowish-white, juicy and rich. September.

Kieffer. Fruit of fine size and good quality; juicy and melting; tree vigorous. October and November.

Seckel. Small, rich, yellowish-brown; one of the best and highest flavored pears grown; very productive. September and October.

Sheldon. Large, yellow or greenish-russet with fine red cheek; flesh a little coarse, melting and crisp, highly perfumed; tree vigorous and productive. October.

Caco Grapes

SMALL FRUITS

Culture. Bramble fruit like blackberries, raspberries, etc., should have all old wood (older than the previous season's growth) cut out close to the ground each spring and the past season's growth should be trimmed back to 3 or 4 feet in height A!l of the old canes should be removed and should be burned.

Mulching of currants and gooseberries will give good results. A strawberry bed should have a light coating two inches deep of coarse hay, or straw that is free from weed seed, after the ground has just frozen; and in the spring raked between the rows and allowed to remain there until the fruit has been harvested. Then it should be removed and cultivation be resumed.

Currants

Hardy, easily cultivated; popular for table use, jellies, etc. Set 4 feet apart in rich ground; cultivate well and prune out old wood. Dust with hellebore for worms.

VARIETIES

Cherry. Particularly large bright red fruit with thin skins; vigorous and productive; excellent quality.

Fay's Prolific. Popular red variety; large, uniform fruit, easily picked. Very productive.

Perfection. Bright red and exceedingly large; one of the most productive. Rich, mild, sub-acid flavor.

Red Cross. Strong growing; long clusters of large sized fruit, red; sweet flavored.

Gooseberries

Set 3 or 4 feet apart, in good rich soil, and give a liberal dressing of rotted manure every season. Regular pruning every year is essential for best results. To prevent mildew spray bushes soon as leaves appear and several times during the summer with potassium sulphide (liver of sulphur)—one ounce to four gallons of water.

VARIETIES

Downing. Large, handsome, pale green and of splendid quality for both cooking and table use; bush vigorous and usually free from mildew.

Smith's Improved. Large, light green fruit, sweet and of good quality; vigorous and productive.

Grape Vines

Even under unfavorable conditions the grape vine will bear fruit, but good culture, pruning and spraying should be applied if the best quality of fruit is desired. Along almost any garden fence or walk there is room for vines enough to furnish luscious grapes from July to November. In such situations they may be planted about 8 feet apart. In vineyard rows, set the vines 6 to 10 feet apart, with 8 feet between rows.

BLACK OR BLUE GRAPES

Campbell Early. Sweet and juicy, seeds few and small, very early; clusters large; especially fine for marketing.

Concord. The standard, reliable blue-black grape everywhere; vigorous and prolific.

Moore's Early. Bunch large, berry large; sweet, juicy; vigorous; ripens about ten days earlier than Concord.

Worden. Grapes larger and perhaps even sweeter than Concord and about a week earlier.

RED OR AMBER GRAPES

Agawam. Very large, with thick skin; sweet and sprightly. Hardy, vigorous, ripens early.

Caco. A remarkable, oustanding new grape. The fruit is very large in handsome and complete bunches; a rich winered over amber. Exceptionally early bearing. Its flavor is luscious, sweet, melting, distinctive. Strong, vigorous grower.

Catawba. A good, long-lived market variety; much used for wine and champagne; large berries, copper-red and purplish; excellent keeper; juicy, sweet, aromatic and rich. Late.

Delaware. Bunches and berries are small but compactly set, light red, with violet bloom; sugary and delicious; early.

WHITE GRAPES

Mocre's Diamond. Leading early white grape; yellow tinged; bunches large, seeds few; juicy and free from pulp. Vine vigorous, prolific; early September.

Niagara. Bunch and berries large, yellowish white; skin is thin but tough; fruit is juicy, sprightly, delicious; vigorous and productive.

Blackberries

Plant rows 6 feet apart, 3 to 5 feet in the row. Pinch caues back when they have reached 4 feet in height.

Each Per 10 Per 100 Strong No. 1 Rooted Cutting Plants.. .10 .65 5.00

VARIETIES

Blower. Large size, jet black, best quality, unexcelled productiveness.

Eldorado. Large black berries, borne in clusters; ripen well together; jet black; melting, sweet and rich; hardy and very productive.

Snyder. Fruit of medium size with no hard, sour core; luscious flavor; a safe and profitable berry to plant; early; enormously productive.

Raspberries

Will do well on any soil that will produce a good corn crop. Land should be thoroughly prepared and well enriched; ground bone is one of the best fertilizers. Keep well cultivated and free from weeds and suckers. As soon as they have done bearing cut out the old wood to give more vigor to the young canes. Rows 5 feet apart; set Cumberland 4 to 5 feet apart; set Latham and St. Regis Everbearing 3 feet apart.

VARIETIES

Cumberland. Black; healthy, vigorous, throwing up stout, stocky, well-branched canes that produce immense crops. Fruit very profitable; large, firm; midseason.

Latham. The new mosaic-free hardy red raspberry; perfectly hardy; its production is superlative; the berries are large and round, brilliant red, with profitable shipping firmness; an eye-catcher on market stands, a delightful table feature, and a perfect canned exhibit.

St. Regis Everbearing (Red Raniere). Fruit commences to ripen with the earliest and continues on young canes until October, many quarts often being picked after the first snow falls. Berries bright crimson, large size, rich, sugary with full raspberry flavor; flesh firm and meaty.

Strawberries

Strawberries succeed in any soil adapted to farm or garden crops. Soil should be prepared to a good depth, well drained and enriched with vegetable manure (muck, rotten turf, wood soil, ashes, etc.). For field culture set rows 3 to $3\frac{1}{2}$ feet apart, 15 to 18 inches in each row; tor garden, 15 inches apart each way, pathway every third row. For large fruit, keep in hills, pinching runners off as they appear. Ground should be kept clean and well cultivated. In winter cover with leaves, straw or litter. Do not cover until ground is frozen, nor so as to smother plants. Remove cover before growth starts in spring. Mulching will keep fruit clean and soil in good condition.

Dip in water as soon as received, and bury roots in moist, shady ground until ready to set out; do not neglect. Spring delivery only.

To planters of large quantities we suggest sending us your list of wants and we shall be glad to give you special letter quotations.

VARIETIES

All of the following varieties are "perfect" and will bear even though planted without other varieties.

Aroma. Late; one of the best varieties; plants are large, vigorous and healthy; fruit is large, roundish of a bright glossy red; excellent quality and exceptionally productive; dependable for large crops of first-class fruit.

Big Joe. Late. Ripens with Chesapeake about three days before Gandy. Fruit is firm, large; good flavor, no green tips; wonderfully productive; strong grower, real money maker; very adaptable to soils.

Bubach. An old-time favorite; produces an abundance of big red berries of medium firmness in midseason; strong grower.

Chesapeake. Late; earlier than Gandy; extra large, evenly shaped and uniform in size; plants are healthy, dark green in color, rich and vigorous, no rust, no disease; used extensively by commercial planters as well as for table use.

Klondyke. Berries uniform in shape and size, dark red, mild and delicious, very handsome; early; one of the best paying varieties; well adapted to southern planting.

STRAWBERRIES-Continued

Premier. Everbearing, early to late; noted for its long fruiting season; adapted to all sections of the country; disease resistant; fruit large to very large, deliciously flavored; foliage smooth, bright and clean; quality unsurpassed; vigorous.

Senator Dunlap. Early midseason; reliable market berry; very productive, succeeding in all parts of the country. Fruit is medium to large, firm and attractive. Always sells for top prices.

Mastodon. The most extensively planted variety for Everbearing Strawberry plants. Fruit is very large, waxy in appearance; among first ranks as a cropper; the luscious, juicy fruit is produced throughout the entire summer and autumn months.

Prcgressive. A wonderful Everbearing Strawberry that produces a heavy crop good-sized berries from spring to autumn; very prolific, vigorous.

Orchard and Small Fruit Planting Suggestions

Apple orchards are usually planned in such a manner that the "permanent" trees are set at the proper distances required when they are fully grown and developed; "filler" trees are set between the permanents and can be removed as the permanent trees develop. Usually the filler trees are chosen for their compact growth and early fruiting habit, thus giving the orchardist an early income; the permanent varieties are usually chosen because of their larger, more spreading and later fruiting habits. All varieties of Peach trees make excellent fillers.

The following diagrams are ideal orchard plans:

SQUARE PLAN for Setting Orchard.

Open circle represents permanents, 40 feet apart; and dots fillers, 20 feet apart. The latter to be removed in twenty years. These are distances adopted by most planters.

TRIANGULAR PLAN for Setting Orchard.

A permanent set, 40 feet apart; C and B fillers, 20 feet apart. C fillers to be removed in fifteen years; B fillers to be removed in twenty-five years. These are distances adopted by most planters.

GENERAL INFORMATION

In our desire to make this book as valuable and interesting to you as possible, we have devoted the last few pages to information which, though brief, will no doubt merit the approval and appreciation of the plant lover. For any other planting information, consult us at any time without obligation. We have selected a few varieties at random from our catalog and suggest suitable uses and situations for them.
